Q: Does DISCO auto-save my Playlists?

Yes! DISCO auto-saves any unsaved Playlists when you re-open DISCO ***on the same browser on the same machine***.

So, say you forgot to click **Save** before doing something like:

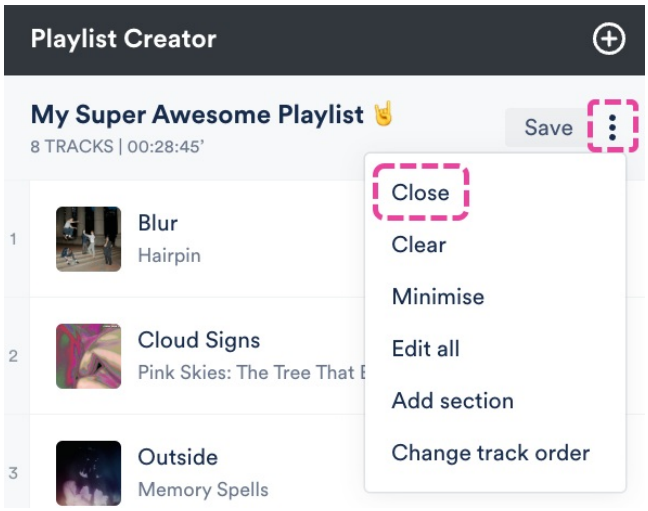

- closing or logging out of DISCO
- closing your browser
- turning off your computer

...there's no need to panic because when you return to your DISCO, the unsaved Playlist will still be waiting for you in the Playlist Creator:

Scenarios where your Playlist won't be auto-saved and can't be recovered:

- you selected **Close** in the **Playlist Creator Menu (⋮)** before saving it

- you re-opened DISCO on a different browser
- you re-opened DISCO on a different machine

A word of advice:

Even though DISCO saves your unsaved Playlists, *we do not recommend* having unsaved Playlists over a few hundred tracks or having more than a few unsaved Playlists at once. Any important Playlists should be saved *as often as possible*, just in case of any browser caching issues.
